## SUMMARY

Software engineer building production AI systems and cloud-native platforms on Google Cloud for a 24/7 freight operation. Strong in LLM pipelines and evals, multi-agent systems, agent guardrails, Claude Code tooling, REST APIs, and EDI X12.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Python, SQL (PostgreSQL, BigQuery GoogleSQL), PHP, Java, HTML, CSS
**Frameworks:** React, React Native, Node.js, Express, FastAPI, Laravel, Svelte, Vite, Tailwind
**Cloud and data:** GCP (Cloud Run, Cloud SQL, BigQuery, Secret Manager), Terraform, Firebase, Docker, PostgreSQL
**AI and agents:** Claude API (Haiku, Sonnet, Opus), Claude Code, LLM evals, Gemini, RAG, NL2SQL, llama.cpp, Ollama, OpenClaw, MCP
**Tools and practices:** GitHub Actions CI/CD, Jira, Agile/Scrum, EDI X12 (204, 210, 214, 990), Twilio, OpenTelemetry, Vitest

## PROFESSIONAL EXPERIENCE

**GH Logistics LLC** San Antonio, TX
*Software Engineer* Jun 2026 to Present
Joined a four-person application development and DevOps team for a 24/7 freight brokerage; now its sole engineer

- Built a multi-agent platform on a dual-GPU workstation: local Qwen and Gemma models on llama.cpp do the work and Claude reviewers approve each plan; agents opened 43 draft PRs (bug fixes and SOPs), guarded by a GitHub App.
- Designed and shipped Data Dump, an LLM pipeline turning chat and email updates into verified TMS notes (Claude Haiku, Sonnet, Batches API); cleared a 24,656-message backlog for under $40, with eval-gated CI and 414 tests.
- Built Bravo Builders, a Claude Code plugin and five-week course that lets operations staff build Bravo Matrix changes; its pre-command hook blocks deploys, merges, and pushes to master so every session ends in a draft PR.
- Built and run the QA module for check-call review (29 merged PRs): Dialpad click-to-call, FourKites and Indemni pushes, a points-based checklist board, and a staging site; cut each dashboard refresh from about 10 MB to 0.2 MB.
- Shipped a Telegram and email helpdesk agent on a local LLM that files IT tickets into the team tracker, with a custom tool plugin, one-time-code sign-in verified against Google Workspace accounts, and a 32-scenario eval suite.
- Single-handedly built and deployed Supplier Bridge, sealed-bid freight procurement live with 6 external companies including J.B. Hunt: Firestore security rules (212 tests), Twilio SMS and push alerts, and a bidding stress harness.
- Cut server latency by over 88% by tracing production 504 timeouts to a Vite dev server running in production; shipped an optimized static build and moved blocking BigQuery queries off live request paths.

**Ventura Telephone** San Antonio, TX
*Software Developer I* Sep 2024 to Feb 2025
*Software Development Assistant* Feb 2024 to Sep 2024

- Built job navigation and payroll web apps and REST APIs for an AT&T contractor (Laravel, PHP, JavaScript, MySQL); optimized databases and modernized legacy code.

## PROJECTS

**AQUA, natural-language-to-SQL assistant** | Rowdy Hacks 2026 (24 hours, team of 3) | aqua-ai.us Oct 2026

- Main backend developer: built a Python NL2SQL engine on Gemini 3.5 Flash-Lite with a self-hosted qwen3:8b (Ollama) fallback, returning SQL, live results, and charts from TigerData PostgreSQL.
- Grounded queries with gemini-embedding-2 retrieval, reaching about 80% accuracy at about 5 seconds per answer; set up the Ubuntu server for the self-hosted model.

## EDUCATION AND CERTIFICATIONS

**University of Texas at San Antonio, B.S., Software Engineering** Expected May 2027
**Northwest Vista College, A.S., Computer Science** Dec 2024
Certifications: Google IT Automation with Python Professional Certificate · C++ Programming Occupational Skills Certificate
