SUMMARY

Software engineer building production AI systems and cloud-native platforms on Google Cloud for a 24/7 freight operation. Strong in LLM pipelines and evals, multi-agent systems, REST APIs, schema design, and EDI X12.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL (PostgreSQL, BigQuery GoogleSQL), PHP, Java, HTML, CSS
Frameworks: React, React Native, Node.js, Express, FastAPI, Laravel, Svelte, Vite, Tailwind
Cloud and data: GCP (Cloud Run, Cloud SQL, BigQuery, Secret Manager), Terraform, Firebase, Docker, PostgreSQL
AI and agents: Claude API (Haiku, Sonnet, Opus), LLM evals, Gemini, RAG, NL2SQL, llama.cpp, Ollama, OpenClaw, MCP
Tools and practices: GitHub Actions CI/CD, Jira, Agile/Scrum, EDI X12 (204, 210, 214, 990), Twilio, OpenTelemetry, Vitest

PROFESSIONAL EXPERIENCE

GH Logistics LLC — San Antonio, TX
Software Engineer — Jun 2026 to Present
Four-person team owning application development and DevOps for a 24/7 freight brokerage

- Built a multi-agent platform on a dual-GPU workstation: local Qwen and Gemma models on llama.cpp do the work and Claude reviewers approve each plan; agents opened 43 draft PRs (bug fixes and SOPs), guarded by a GitHub App.
- Shipped a Telegram and email helpdesk agent on a local LLM that files IT tickets into the team tracker, with a custom tool plugin, a staff name matcher 100% correct on 274 employees, and a 32-scenario eval suite.
- Designed and shipped Data Dump, an LLM pipeline turning chat and email load updates into verified TMS notes (Claude Haiku, Sonnet, Batches API); cleared a 24,656-message backlog for under $40, with eval-gated CI and 414 tests.
- Cut server latency by over 88% by tracing production 504 timeouts to a Vite dev server running in production; shipped an optimized static build and moved blocking BigQuery queries off live request paths.
- Designed a normalized 44-table Cloud SQL for PostgreSQL schema for the migration off BigQuery, splitting a 131-column loads table into a 31-column core plus 7 satellite tables (node-pg-migrate).
- Launched Supplier Bridge, a sealed-bid freight procurement platform, to production with 4 external companies; built its Firestore security rules (212 tests), Twilio SMS and push alerts, and a bidding stress harness.
- Integrated the LoadStop TMS REST API into Bravo Matrix, the internal operations platform, and built its QC workspace; reworked rate-limited syncs to pull about 9,900 loads in 65 seconds.
- Audited backend services for SQL injection, unauthenticated endpoints, and N+1 loops; wrote the remediation plan.

Ventura Telephone — San Antonio, TX
Software Developer I — Sep 2024 to Feb 2025
Software Development Assistant — Feb 2024 to Sep 2024

- Built job navigation and payroll web apps and REST APIs for an AT&T contractor (Laravel, PHP, JavaScript, MySQL); optimized databases and modernized legacy code.

PROJECTS

AQUA, natural-language-to-SQL assistant | Rowdy Hacks 2026 (24 hours, team of 3) | aqua-ai.us — Oct 2026

- Main backend developer: built a Python NL2SQL engine on Gemini 3.5 Flash-Lite with a self-hosted qwen3:8b (Ollama) fallback, returning SQL, live results, and charts from TigerData PostgreSQL.
- Grounded queries with gemini-embeddings-2 retrieval, reaching about 80% accuracy at about 5 seconds per answer; set up the Ubuntu server for the self-hosted model.

EDUCATION AND CERTIFICATIONS

University of Texas at San Antonio, B.S., Software Engineering — Expected May 2027
Northwest Vista College, A.S., Computer Science — Dec 2024
Certifications: Google IT Automation with Python Professional Certificate · C++ Programming Occupational Skills Certificate
