SUMMARY

Full-stack software engineer building and operating cloud-native systems on Google Cloud for a 24/7 freight operation. Strong in REST APIs, schema design and migration, root cause analysis, EDI X12, and LLM applications.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL (PostgreSQL, BigQuery GoogleSQL), PHP, Java, HTML, CSS
Frameworks: React, React Native, Node.js, Express, Laravel, Svelte, Vite, Tailwind
Cloud and data: GCP (Cloud Run, Cloud SQL, BigQuery, Secret Manager, IAM), Firebase, Docker, PostgreSQL, MySQL
AI and agents: Gemini API, embeddings and RAG, NL2SQL, Ollama, Claude Code subagents, OpenClaw, Tailscale
Tools and practices: GitHub Actions CI/CD, Jira, Agile/Scrum, EDI X12 (204, 210, 214, 990), Twilio, OpenTelemetry, Vitest

PROFESSIONAL EXPERIENCE

GH Logistics LLC San Antonio, TX
Software Engineer Jun 2026 to Present
Four-person team owning application development and DevOps for a 24/7 freight brokerage

- Cut server latency by over 88% by tracing production 504 timeouts to a Vite dev server running in production; shipped an optimized static build and moved blocking BigQuery queries off live request paths.
- Designed a normalized 44-table Cloud SQL for PostgreSQL schema for the migration off BigQuery, splitting a 131-column loads table into a 31-column core plus 7 satellite tables (node-pg-migrate).
- Launched Supplier Bridge, a sealed-bid freight procurement platform, to production with 4 external companies; built its Firestore security rules (212 tests), Twilio SMS and push alerts, and a bidding stress harness.
- Integrated the LoadStop TMS REST API into Bravo Matrix, the internal operations platform, and built its QC workspace; reworked rate-limited syncs to pull about 9,900 loads in 65 seconds.
- Audited backend services, finding SQL injection, unauthenticated endpoints, and N+1 DML loops; wrote the phased remediation plan and a monitoring guide (structured logging, OpenTelemetry).
- Developed REST APIs across brokerage and asset-operations microservices, including EDI X12 204 load tenders, and added server-side pagination and caching to about 10 slow endpoints.
- Deployed containerized microservices to Cloud Run with Secret Manager and ran the GitHub CI/CD pipeline (auto-deploy to dev, manual promotion to production).
- Building internal AI agent infrastructure: a multi-device agent harness on Tailscale-linked Mac minis and an OpenClaw deployment for company agent skills and an internal knowledge base.

Ventura Telephone San Antonio, TX
Software Developer I Sep 2024 to Feb 2025
Software Development Assistant Feb 2024 to Sep 2024

- Built internal job navigation and payroll web apps for an AT&T contractor using Laravel, PHP, JavaScript, and MySQL.
- Added features and REST APIs to business systems; optimized MySQL databases and modernized legacy code.

PROJECTS

AQUA, natural-language-to-SQL assistant | Rowdy Hacks 2026 (24 hours, team of 3) | aqua-ai.us Oct 2026

- Main backend developer: built a Python NL2SQL engine on Gemini 3.5 Flash-Lite with a self-hosted qwen3:8b (Ollama) fallback, returning SQL, live results, and charts from TigerData PostgreSQL.
- Grounded queries with gemini-embeddings-2 retrieval, reaching about 80% accuracy at about 5 seconds per answer; set up the Ubuntu server for the self-hosted model.

EDUCATION AND CERTIFICATIONS

University of Texas at San Antonio, B.S., Software Engineering Expected May 2027
Northwest Vista College, A.S., Computer Science Dec 2024
Certifications: Google IT Automation with Python Professional Certificate · C++ Programming Occupational Skills Certificate
